## PCI Compliance Minus Complication

Changing requirements. Changing environments. Keeping up with PCI compliance is a challenging, time-consuming task. And with potential vulnerabilities popping up daily threatening your ability to be PCI compliant – there’s no room for error. It’s time for a change.

### Compliance With Added Security

Ntirety’s Managed Vulnerability Scanning for PCI Compliance alleviates the burden and complexities of your team maintaining PCI compliance certification and approved scanning vendor (ASV) attestation requirements. Additionally, this smart solution goes further, providing ongoing security evaluation and recommendations from our three world-class, U.S.-based security operations centers (SOCs) to safeguard your environment and end users from cyberthreats.

### PCI Compliance With ASV Attestation

Ntirety SOC professionals will assist in vulnerability scan setup, performance, and analysis, and provide any remediation recommendations required to satisfy compliance standards. We’ll also work with an ASV to receive the required attestations to meet compliance requirements.

### Security Posture Evaluation and Remediation Guidance

Beyond helping you become and remain compliant, Ntirety provides expert insights and recommendations to improve your security posture. Our SOC professionals review vulnerability scans with you on a routine basis and help develop remediation plans required to achieve ASV attestation for PCI compliance.

### On-Demand or Scheduled Self-Scanning

In addition to services and information provided by our SOCs, Ntirety enables you to initiate scans of your environment on demand or schedule them as you wish through our customer portal. Now you have full visibility and control of your environment.

Visit [www.ntirety.com](http://www.ntirety.com) to discover how Ntirety’s Managed Vulnerability Scanning for PCI Compliance can help you become and remain compliant without the complexity, risk, or hours of going it alone.
