

Protect Against Phishing

Report Phishing

Did you know that most of today's security breaches are caused by phishing emails? It's really not that surprising considering the absurd volume of mass phishing, spear phishing, whaling, and socially engineered attacks raining down on end users.

Today's phishing attacks are highly sophisticated and prey upon human nature, targeting unaware and unsuspecting employees just trying to do their jobs. The new work-from-anywhere reality has only escalated the volume and success rate of these attacks. Protect yourself before an employee unknowingly invites trouble into your internal network and computing environment.

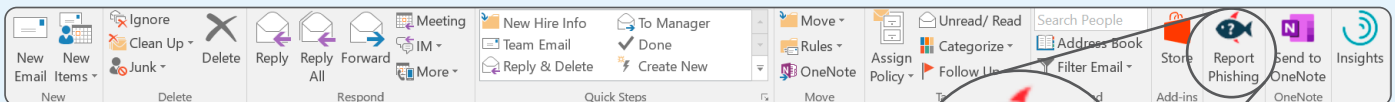

Realistic Simulations

There is no technology that can fully safeguard you against phishing. The only way to close the gaps is to train employees to spot phishing emails by simulating the actual experience.

Ntirety Phishing-Awareness Training uses realistic emails based on our vast real-world security experience to help your workforce understand how to spot and avoid likely phishing emails. Using proven security-education modules and simulated phishing exercises, we elevate employees' phishing-avoidance IQ. As their knowledge grows over time, so does your defense against the real thing.

How It Works

- Ntirety works with you to implement a fully managed phishing-awareness solution, including all the expertise and resources you need to reach your desired readiness posture
- Easily tailor your program to fit your business, specific to departments, job levels, and industries
- Automatically deploy phishing tests based on your desired scheduling (weekly, monthly, quarterly, etc.)
- A "Report Phishing" button included for email clients enables users to quickly and easily report suspicious emails to the Ntirety Security Operations Center

(Continued on the back page)

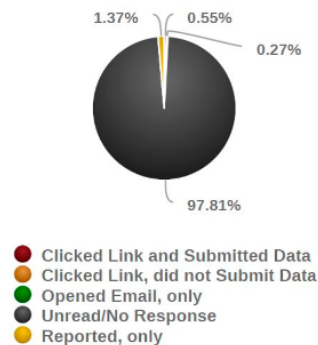

Real Results

- User-level reporting makes it clear which employees need training and other corrective focus
- Ntirety security professionals provide recommendations for supplemental training based on identified user tendencies
- Detailed reporting shows program progress and efficacy, including proof of real progress and upskill
- Bolster employee learning with access to an industry-leading learning-management system (LMS) featuring hundreds of training videos covering a broad range of topics across cybersecurity and compliance

Summary Report

Scenario Name:	Phishing Demo Scenario
